

AI Society Member Handbook

A fictional handbook used for the Modern RAG in Practice workshop.

About the AI Society

The AI Society (AIS) is a student-run organization dedicated to helping members learn, build, and ship artificial intelligence projects. Membership is open to all students regardless of major or prior experience. The Society runs weekly workshops, a semester-long project track, and a mentorship program pairing newer members with experienced builders. Our mission is to make hands-on AI education accessible and practical.

Membership and Dues

Standard membership costs 15 dollars per semester and includes access to all workshops, the project track, and the members-only Discord server. Dues are waived for members who volunteer as workshop assistants for at least three sessions in a semester. Membership renews each semester and does not carry over automatically; members must re-register at the start of the fall and spring terms.

Workshops

Workshops run every Tuesday from 6 to 8 PM in the Engineering building, room 210. Each workshop is self-contained, so members can attend any session without having attended previous ones. Topics rotate across machine learning fundamentals, retrieval-augmented generation, model deployment, and applied projects. Workshop recordings are posted to the Discord server within 48 hours for members who cannot attend live.

The Project Track

The project track is a semester-long program where teams of three to five members build and ship a working AI application. Teams meet weekly and present a demo at the end-of-semester showcase. Members who complete the project track receive a certificate and are eligible to apply for the Society's summer research stipend. Project ideas must be approved by a faculty advisor before the fourth week of the semester.

Code of Conduct

All members are expected to treat one another with respect. Harassment, discrimination, and plagiarism are not tolerated and may result in removal from the Society. Members must credit

external code, datasets, and models used in their projects. Violations should be reported to any officer or to the faculty advisor. Reports are handled confidentially.

Officer Elections

Officer elections are held once per year during the last workshop of the spring semester. Any member in good standing who has attended at least six workshops during the academic year is eligible to run. Officers serve a one-year term and may be re-elected once. Open positions include President, Vice President, Treasurer, and Workshop Coordinator.

Contact and Resources

Members can reach officers through the Discord server or by email at ais-officers@example.edu. The Society maintains a shared resource library of tutorials, datasets, and past project repositories, accessible from the members-only section of the Discord. New members should start with the onboarding channel, which links to setup guides and the current semester schedule.
